

# WORLD AGRICULTURAL PRODUCTION AND TRADE Statistical Report

---

JUNE 1975

## WORLD SUMMARIES

### Production:

- 1 World Sugar And Molasses Output  
Down in 1974-75
- 7 1974 World Corn Production Declines
- 9 1974 Rice Production Sets A New Record
- 11 Smaller World Coffee Crop  
Estimated For 1975/76
- 14 World Hop Estimate Revised Downward Slightly
- 16 World Exports Of Tobacco  
Set A New Record In 1974
- 18 World Cottonseed Production A Record In 1974 Exports  
Of Oil And Meal, To Increase In 1975
- 22 World Milk Production Remained Practically Unch

---

FOREIGN AGRICULTURAL SERVICE U.S. DEPARTMENT OF AGRICULTURE

## **WORLD SUGAR AND MOLASSES OUTPUT DOWN IN 1974-75**

Production of both sugar and molasses was down in 1974/75 from a year earlier. The latest estimate places the 1974/75 world sugar crop at 79.4 million metric tons (87.5 million short tons) compared with the 80.7 million tons harvested the previous year. World production had been a record in 1973/74, but the 1974/75 decrease was accompanied by, increasing world prices which reached a peak in November, 1974.

In the Soviet Union—the world's largest producer of beet sugar—production declined from 9.6 million tons in 1973/74 to 8 million tons in 1974/75, as a result of poor weather. Output decreased in the rest of Europe from 17.2 million tons in 1973/74 to 15.8 million tons in 1974/75 for the same reason.

In Africa, production was up in South Africa, but decreases in several other countries resulted in a slightly smaller total for the continent in 1974/75 as compared with the year before.

North America was also down slightly in sugar production from a year earlier as decreases in Cuba and in U.S. beet sugar output were not matched by increases in U.S. cane sugar and in the rest of North America.

In Asia, production increased during 1974/75 over that of previous year. Production was up in India particularly because of better disease control, increased acreage, and more generally favorable conditions.

Output also was higher in South America, as Brazil continued to allow more sugar to be produced.

Oceania also showed a gain as Australia responded to the world market.

Preliminary estimates indicate that output will be higher in Mexico, the United Kingdom, Spain, the Netherlands, Italy, and the Philippines, among other countries, in 1975/76. The season has been favorable so far in the USSR, while beet plantings were increased significantly in the United States.

Molasses output is just slightly below that of a year earlier in 1974/75 as the world sugar crop is also smaller. The largest decline is being registered in the USSR, where crushing is off.

CENTRIFUGAL SUGAR (RAW VALUE): PRODUCTION IN SPECIFIED COUNTRIES - AVERAGE 1965-66/1969-70; ANNUAL 1970-71/1974-75 1/

1/ Years shown are crop year of the crop-harvesting season. For chronological arrangement here, all campaigns which begin not earlier than May of one year, nor later than April of the following year, are placed in the same crop-harvesting year. The entire season's production of each country is credited to the May/April year in which harvesting and sugar production began. Refined beet sugar is generally converted to raw value by multiplying by 1.087, while refined cane sugar is multiplied by 1.07 to obtain the raw value equivalent. 2/ Preliminary. 3/ Other Africa includes Afar-Issas, Algeria, Angola, Cameroon, Congo (Brazzaville), Ghana, Liberia, Malawi, Nigeria, Somali Republic, Sudan, Tunisia, and Zambia. 4/ Includes khandasari. 5/ Since January 1, 1972, included in Japan. 6/ Other Asia includes Afghanistan, Iraq, Israel, Lebanon, Nepal, South Korea, South Vietnam, Sri Lanka (Ceylon), and Syria. Bangladesh is included in Other Asia beginning in 1971-72.

Foreign Agricultural Service. Prepared or estimated on the basis of official statistics of foreign governments, other foreign source material, reports of U.S. Agricultural Attaches and Foreign Service Officers, results of office research, and related information.

N.A. = Not available.

1/ Noncentrifugal sugar includes all types of sugar produced by other than centrifugal process which is largely for consumption in the relatively few areas where produced. The estimates include such kinds known as piloncillo, panels, papelon, chancaca, radura, jaggery, gur, muscovado, panaocha, etc. 2/ Years shown are last year's crop-harvesting season. For chronological arrangements here all campaigns which begin not earlier than May of one year, nor later than April of the following year, are placed in the same crop-harvesting year. The entire season's production of each country is credited to the May/April year in which harvesting and sugar production began. 3/ Preliminary. 4/ Since January 1, 1972, included in Japan.

Foreign Agricultural Service. Prepared or estimated on the basis of official statistics of foreign governments, other foreign source materials, reports of U.S. Agricultural Attaches and Foreign Service Officers, results of office research and related information.

<sup>1/</sup> Years shown are crop year of the crop-harvesting season. For chronological arrangement here, all campaigns which begin not earlier than May of one year, nor later than April of the following year, are placed in the same crop-harvesting year. The entire season's production of each country is credited to the May/April year in which harvesting and sugar production began. Refined beet sugar is generally converted to raw value by multiplying by 1.087, while refined cane sugar is multiplied by 1.07 to obtain the raw value equivalent. <sup>2/</sup> Preliminary. <sup>3/</sup> Other Africa includes Afars-Issas, Algeria, Angola, Cameroon, Congo (Brazzaville), Ghana, Liberia, Malawi, Nigeria, Somali Republic, Sudan, Tunisia, and Zambia. <sup>4/</sup> Includes Khandesari. <sup>5/</sup> Since January 1, 1972, included in Japan. <sup>6/</sup> Other Asia includes Afghanistan, Iraq, Israel, Lebanon, Nepal, South Korea, South Vietnam, Sri Lanka (Ceylon), and Syria. Bangladesh is included in Other Asia beginning in 1971-72.

Foreign Agricultural Service. Prepared or estimated on the basis of official statistics of foreign governments, other foreign source material, reports of U.S. Agricultural Attaches and Foreign Service Officers, results of office research, and related information.

1/ In each country the year of production is the same as that for centrifugal sugar production. 2/ Calendar year; first year mentioned in heading.  
3/ Includes hi-test molasses. 4/ May include edible molasses.

Foreign Agricultural Service. Prepared or estimated on the basis of official statistics of foreign governments, other foreign source material, reports of U. S. Agricultural Attaches and Foreign Service Officers, results of office research, and related information.

## 1974 WORLD CORN PRODUCTION DOWN

World corn production for 1974/75 is reported at 283 million metric tons on the basis of data received as of May 30, 1975—almost 10 percent below the record crop of a year ago. The reduced output resulted from a 12 percent drop in world average yields, which more than offset the 3 percent increase in total area.

Corn production in the U.S., the world's largest producer, was off significantly—down over 17 percent from last year's record output of 143 million tons. U.S. corn yields declined by 20 percent to their lowest level since 1964, thus wiping out any hoped-for increases in production as a result of a 5 percent expansion in harvested area. The dramatic shortfall in U.S. production accounted for approximately 85 percent of the total world decline. Elsewhere in North America, production in Canada during 1974 was down 8 percent, and Mexican production declined by almost 15 percent.

South American corn production dropped 5 percent below the 1973 level primarily as a result of a deteriorating situation in Argentina, where the harvest is

now expected to be less than 7.5 million tons as opposed to earlier estimates that were as high as 10 million tons.

A six percent reduction in output is reported in Europe, with the decline reflected in both the East and the West. In Eastern Europe, the shortfall is accounted for mainly by reduced crops in Bulgaria and Yugoslavia, and in West Europe the bulk of the reduction is explained by a shortfall in France.

Corn production in Africa during 1974/75 was off only slightly from last year's record harvest. In the Republic of South Africa—the continent's largest corn producer—a near-record crop has been harvested. Currently estimated at around 10.5 million tons, this harvest is second in size only to last year's record crop of just over 11 million tons.

Only Asia and Oceania recorded increases in production in 1974. Generally good crops were registered in the People's Republic of China, Indonesia, Thailand, and Turkey.

1/ Years shown refer to year of harvest in the Northern Hemisphere. Harvests of Northern Hemisphere countries are combined with those of the Southern Hemisphere which immediately follow; thus the crop harvested in the Northern Hemisphere is combined with estimates for the Southern Hemisphere harvest which begins late in 1974 and ends early in 1975. 2/ Harvested area data when available. 3/ Preliminary.

Foreign Agricultural Service. Prepared or estimated on the basis of official statistics of foreign governments, reports of U.S. Agricultural Attaches, and other foreign source materials. Based on data as of March 3, 1975. Conversions are as follows: One hectare = 2.471 acres; one quintal = 3,936 lbs.; one metric ton = 39,368 lbs.; one quintal/hectare = 1,593 bushels/acre.

NOTE: This table reflects major changes recently made in the Chinese corn production series.

## 1974 RICE PRODUCTION SET A NEW RECORD

A bumper rice harvest in the People's Republic of China (PRC) as well as sizable production increases in the United States, Brazil, Colombia, and Indonesia have overcome reported output declines—primarily in India—to establish in 1974 a new world production record for rice. Based on data received as of May 30, 1975, the 1974 harvest is currently estimated at 325 million metric tons, or 3 million tons above last year's output. On balance, the entire increase can be attributed to a one percent expansion in world area as average world yields remained constant.

The Asian crop—over 90 percent of the world total—reached a record level for the second year in a row. A dramatic production increase in the PRC—up almost 5 million tons from last year—along with generally excellent crops elsewhere in Asia pushed the area total

400,000 tons over the 1973 level in spite of a six-million-ton decline in Indian output. The 1974 summer and fall monsoons in India were poor and the fall-harvested rice crop suffered accordingly.

North American production was up 1 million tons, attributable almost entirely to a 20 percent increase in the U.S. crop. The two largest producers in South America—Brazil and Colombia—both had bumper harvests, bringing the area total up 1 million tons above that of last year.

Harvests elsewhere showed little change from a year ago. A reduced European crop was offset by an increase in Soviet output, while Australian production was reported at the 400,000-ton level of 1973. Production in Africa was up as a result of Continent-wide good crops.

## **SMALLER WORLD COFFEE CROP ESTIMATED FOR 1975/76**

The Foreign Agricultural Service's first estimate of the 1975/76 world coffee crop is for a total production of 72.4 million bags (132.276 lb. each) and an exportable production of 52.7 million bags. This would be a decrease of 12 percent in exportable production from 1974/75 production. As considered here, exportable production represents total harvested production minus estimated domestic consumption. It does not take into account stocks from previous harvests that may still be available in some producing countries.

Brazil is likely to account for much of the decrease in the 1975/76 crop from that of 1974/75. Production is also expected to decrease in Colombia and El Salvador, as well as in Angola and the Ivory Coast in Africa.

Some small revisions have also been made in the estimates for 1974/75, which are now carried as 79 million bags total production, of which 59.8 million bags were available for export from that crop.

## WORLD HOP ESTIMATE REVISED DOWNWARD SLIGHTLY

World hop production in principal producing countries during 1974 is now estimated at 110,053 metric tons, about 450 tons less than that of the November 1974 estimate. This represents a 7 percent decrease from the 1973 crop of 117,944 tons. Much of this decline is attributable to a 13 percent decrease in the West German harvest and the 26 percent setback in the hop crop in Czechoslovakia. Production in the U.S. registered an increase for the fifth consecutive year.

For the past 5 years, this report has shown an estimated 8,482 tons of hops production in the Soviet Union. While this may be an accurate estimate, it has been reported that the total USSR crop may be as much as one third higher than the current estimate for 1974. However, until that advice can be verified, this report will continue to carry the present estimate.

World hops acreage rose slightly for the 1974 season, with an expansion of less than 1 percent in the five major producing countries. Acreage in the U.S. registered the greatest increase. U.S. area planted to hops in 1974 amounted to 13,112 hectares, up 3 percent from the level of the previous year. Hops area in West Germany rose less than 1 percent to 20,173 hectares and area planted to hops in the United Kingdom declined by 3 percent to a total of 6,567 hectares acres. In Czechoslovakia, planted area rose slightly to total 9,351 hectares, compared with 9,010 hectares during the previous year. Area planted to hops in Yugoslavia rose less than 1 percent to total 4,079 hectares in 1974.

U.S. exports of whole hops totaled 4,538 tons during the September 1974-March 1975 period of the current marketing year, with 967 tons of hop extract being

shipped during the same period. This total compares with 5,248 tons of whole hops and 865 tons of extract exported during the same period in 1973/74. Whole hop and extract exports for the entire 1973/74 season amounted to 6,714 tons and 1,526 tons, respectively.

Through March 1975, principal markets for U.S. whole hops were Canada, the USSR, Mexico, and Ireland, while Mexico and Colombia ranked as the major markets for U.S. extract exports. Canada, Mexico, and Ireland have been traditional markets for U.S. hops, but the Soviet Union has only recently emerged as a substantial outlet for U.S. hop exports. The USSR imported 906 tons of U.S. hops in the 1973/74 season, and through March 1975 of the current season had imported 868 tons. (It is believed that 201 tons of U.S. hop extract reported as exported to the USSR during 1973/74 were in fact hops exports.) Russia's emergence as a large importer of U.S. hops results primarily from efforts to increase domestic consumption of beer in that country.

U.S. hops imports during the September-March period registered an increase in hops but a decrease in extract. Whole hop imports totaled 6,096 tons, while extract imports amounted to only 0.5 tons. During the similar period in the 1973/74 season, U.S. imports of whole hops were 5,850 tons, with 19 tons of hop extract imports reported. Whole hop and hop extract imports for the entire 1973/74 season totaled 6,415 tons and 20 tons, respectively.

As used in this report and in all subsequent summaries, tonnages are quoted in metric units, and one metric ton is equivalent to 2,204.6 pounds.

## WORLD EXPORTS OF TOBACCO SET A NEW RECORD IN 1974

Based on preliminary data, world exports of unmanufactured tobacco continued to increase in 1974 and reached a new record. Expanded demand brought this increase about, even though the export situation again was faced with tight supplies and higher prices, such as had limited trade in 1973.

World exports (excluding those of the centrally planned economies) are now estimated at 2,724 million pounds—15 percent above the revised 1973 level and 51 percent above the 1965-69 5-year average. Most major exporting countries increased shipments during the period, with the six largest accounting for almost 60 percent of total export trade. These six major exporters increased shipments 17 percent over the previous year.

Imports also continued to rise to new records. They were up 13 percent to an estimated 2,606 million pounds in 1974. The five largest importing countries—West Germany, the United Kingdom, the United States, France, and Japan—account for well over half of all world imports. They increased their purchases over those of the previous year by 20, 10, 10, 4 and 34 percent, respectively.

Much of the increase came from alternative suppliers, who expanded their exports of blending-type tobacco to major consuming countries. As a result, the U.S. market share suffered in the United Kingdom, West Germany, and Japan as well as in a number of smaller markets.

The United States, however, remained the leading exporter of tobacco, and supplied a total of 651 million pounds in 1974—up 6 percent from 1973. A 14 percent decline in exports to the European Community was more than offset by larger shipments to the expanding markets of the Middle East and Asia.

Japan has become the largest market for U.S. tobacco, taking 110 million pounds in 1974—up 39 percent from

1973. This market and the Middle East markets are expected to expand even more in 1975. Yet the U.S. share of world exports continues to decline as foreign suppliers expand their trade. The U.S. share dropped to 24 percent in 1974, compared with 26 percent in 1973 and 31 percent during the 1965-69 period.

The EC, which accounts for over half of all world imports, assured its members larger stocks by increasing its purchases 9 percent, with all countries except Denmark importing more. West German arrivals were up 20 percent to 444 million pounds as German manufacturers took advantage of favorable exchange rates to replenish low carry-in stocks.

The United Kingdom imported 362 million pounds, 10 percent more than in 1973. However, the U.S. share in both the United Kingdom and West Germany continued to drop as these countries sought cheaper supplies from preferential areas in an attempt to reduce the overall cost of imported leaf.

EC exports also were larger and rose 41 percent to 268 million pounds. Italy, the major EC tobacco producer, accounted for most of the increase, with its exports soaring to 142 million pounds—partly a result of high buyers' premiums and export subsidies.

The Asian markets continued to be the growing tobacco-consuming giant. Asian imports of leaf in 1974 totaled 364 million pounds—up 38 percent from 1973 and 80 percent above the 1965-69 average. Japan accounted for much of the increase, although most of the countries took more.

Indonesia's imports totaled 30 million pounds in 1974—up 157 percent as it became the second largest importer in Asia. The Republic of China (Taiwan) ranked third, also taking 30 million pounds.

## **WORLD COTTONSEED PRODUCTION A RECORD IN 1974; EXPORTS OF OIL AND MEAL TO INCREASE IN 1975**

World production of cottonseed during 1974 is currently estimated at a record 25.8 million metric tons, up approximately 437,000 tons from 1973's estimated outturn of 25.3 million tons. World output of cottonseed oil and meal in 1975 is expected to be about 3.2 million and 9.2 million tons, respectively. Estimates of world cottonseed oil and meal production have been revised upward since the adoption of a 70 percent crushing factor applied to cottonseed production in the People's Republic of China.

World cottonseed oil exports in 1975 are forecast at 440,000 tons, up 37,000 tons from 1974's estimated volume of trade. In 1975, world cottonseed meal exports are expected to increase about 5 percent to approximately 1.1 million tons.

The United States usually supplies between 60 and 70 percent of world cottonseed oil exports each year. In calendar 1974, exports were 277,000 tons, up 29,000 tons from the previous year. The leading importers of U.S. cottonseed oil last year were Egypt, 127,000 tons; Venezuela, 39,000 tons; Japan, 18,000 tons; Sweden, 14,000 tons; Canada, 13,000 tons; Dominican Republic, 12,000 tons; and Iran, 11,000 tons. The European

Community imported 17,000 tons from the United States.

Exports from the United States in calendar 1975 are forecast at 300,000 tons—about the same as the 1964 near-term peak level of 302,000 tons. During the January-April period this year, exports were 135,700 tons, compared with 99,400 tons during January-April 1974—primarily because of a surge in exports to Egypt (up 188 percent). However, during the coming months a slowdown in the rate of U.S. exports to all destinations is anticipated as import requirements in major markets are about satisfied.

Exports of cottonseed oil from the Sudan declined sharply in 1974. Poor 1973 peanut and sesame harvests may have been important factors causing a substantial increase in the apparent consumption of cottonseed oil in the Sudan last year.

World cottonseed meal exports in 1974, estimated at about 1 million tons, were at their lowest volume since 1961. Exports from major producer-exporters were down approximately 200,000 tons. Indian exports at a reported 140,000 tons were down 116,000 tons from calendar 1973.

Assumed extraction rate.....	16.0	16.0	16.0	17.0

1/ Seed harvested in previous year. Oil production estimated on the basis of average assumed extraction rates and crushings as indicated, and therefore presents potential rather than actual oil production. 2/ Includes revised series for cottonseed oil output in the People's Republic of China. 3/ Estimated. 4/ Forecast. 5/ Exports of seed expressed as oil using assumed extraction rates as indicated. 6/ Total exports of edible vegetable oil minus sunflowerseed oil exports are assumed to be primarily cottonseed oil.

1/ Seed harvest in previous calendar year. Meal production estimated on the basis of average assumed extraction rates and crushings as indicated, and therefore represents potential rather than actual meal production. 2/ Partly estimated. 3/ Forecast. 4/ Exports of seed expressed as meal using assumed extraction rates as indicated. 5/ Meal exports presumed to include significant quantities of hulls since the total volume of exports on a meal basis exceeds calculated meal production. 6/ Estimated at 50 percent of total vegetable cake and meal exports, which are not separately classified. 7/ Represents an increasing percentage of total, 15 percent in 1960 up to 50 percent in 1975.

g/ Includes revised series for cottonseed meal output in the People's Republic of China.

## **WORLD MILK PRODUCTION REMAINED PRACTICALLY UNCHANGED IN 1974**

### **Production**

Milk production in 18 principal producing countries in 1974 totaled 418.2 billion pounds, practically unchanged since 1972, but 3 percent greater than in 1971. Yield per cow was up by 0.8 percent, with increases in 12 countries and decreases in 6. Total cow numbers were down slightly from 1973 but about the same as in 1972. The countries with the greatest decrease in cow numbers were Canada, the United States, and Italy.

Milk output in 13 European countries in 1974 totaled 247 billion pounds, exceeding production in 1973, 1972, and 1971 by 0.7 percent, 4.2 percent, and 8.2 percent, respectively. Decreased production in Ireland, the United Kingdom, and Italy was more than offset by increases in other countries.

In the European Community (EC), milk production in 1974 rose only 0.6 percent over the 1973 level, but has increased 3.7 percent since 1972 and 8.5 percent since 1971. The countries with the greatest increases in 1974 were Belgium-Luxembourg, France, and the Netherlands.

In Sweden and Switzerland, milk production increased by 2.8 percent and 1.4 percent, respectively.

In Oceania, a 2.9 percent decrease in production in Australia and a 5.5 percent decrease in New Zealand gave a combined decrease in 1974 of 4.1 percent below the 1973 level and 6 percent below that of 1972. In North America, milk production at 132.1 billion pounds in 1974 was approximately the same as in 1973 but 4 percent less than in 1972, a result of a 5.5 percent drop in production in Canada and a 3.7 percent drop in the United States.

### **Utilization**

Milk used for fluid purposes in the 18 specified

countries in 1974 totaled 133.6 billion pounds, 1.9 percent less than in 1973, 2.8 percent less than in 1972, and 5 percent less than in 1971. Fluid milk consumption increased in Canada, Denmark, Greece, Sweden, England, Japan, and New Zealand, showed no change in Ireland, and decreased in the remaining 10 countries.

In the EC, fluid milk consumption in 1974 totaled 53.7 billion pounds, 0.5 percent less than in 1973, 2 percent less than in 1972, and 8.7 percent less than in 1971.

In North America, fluid milk consumption continued its downward trend, following a single year upturn in 1972. Consumption in 1974 at 54.8 billion pounds was 3.9 percent less than in 1973 and 5.3 percent less than in 1972. A small increase in consumption in Canada was more than offset by a decrease in the United States.

Milk used for factory production in the 18 selected countries in 1974 totaled 256.7 billion pounds, 61 percent of total production. The recent trend for increased utilization of milk for manufacturing purposes continued, with utilization in 1974 at 1.1 percent over 1973, 1.3 percent over 1972, and 8.5 percent greater than in 1971.

The greatest shift to the use of milk for manufacturing purposes was in the EC, with 142.2 billion pounds in 1974, 1.1 percent over 1973, 5.6 percent over 1972, and 18 percent greater than in 1971. In North America, 72.1 billion pounds of milk were used for manufacturing purposes in 1974, 3.2 percent greater than in 1973 but 2.9 percent less than in 1972. In Oceania, the amount of milk used for manufacturing declined, largely as a result of a decrease in total milk production.

Milk fed to livestock in 1974 amounted to 27.9 billion pounds, 0.5 percent greater than in 1973 and 6.9 percent greater than in 1972. Most of the increase was in France, with small increases occurring in Ireland and Switzerland.
